CIVICCONNECT AI

SMART CITY ISSUE REPORTING AND ROUTING

DEMO USER MANUAL

CivicConnect AI

Demo User Manual

A practical walkthrough for presenting the hosted class demo. It covers how to open the site, show the report lifecycle, switch personas, and finish safely without publishing real personal information.

- **REPORT** — Capture a local issue
- **ROUTE** — Prioritize and assign work
- **TRACK** — Follow progress to resolution

CLASS PROJECT DEMO | 30 OCTOBER 2026

01 BEFORE THE PRESENTATION

Prepare the demo session

Open the production site in a browser: https://civic-connect-ai-sigma.vercel.app/. The starting view should show the Guest role and the CivicConnect home page.

Have the class demo access key available from the project maintainer through a private channel. Enter it only in the masked access-key field in the app. Do not put the key in this manual, a slide, a shared screen, or a public chat.

Plan an 8 to 10 minute walkthrough. The seeded sample data is shared by all participants, so avoid changing statuses during the presentation. Five users may follow along at once as a demo target, but the service has not been load-tested for that capacity.

Suggested walkthrough: 8 to 10 minutes

Useful demo record

COMPLAINT ID	SAMPLE ISSUE	CURRENT STATE
CC-2026-9785	TEST CASE ONLY - Guest report flow. The description explicitly says it is test data, not a real issue.	In Progress; routed to Roads and Transportation.

This saved record is safe to use for the tracker and Roads Officer view. It has no uploaded photo and contains no real reporter contact details.

02 GUEST WALKTHROUGH

Show the public experience

1. Start at Home. Point out Report Issue, Track Complaint, Public Map, and Public Dashboard. The homepage metrics load from the live demo API; a dash may appear briefly while they load.

2. Open the public dashboard. Select Public Dashboard to show community reports, status labels, department routing, and links to complaint timelines. Guest mode does not need a sign-in.

3. Demonstrate tracking. Open Track Complaint, enter CC-2026-9785, and select Track Status. Show its issue title, priority, assigned department, current In Progress status, and audit trail. Explain that tracking uses the ID and does not ask for a phone number or email.

4. Preview the report form. Open Report Issue and show the title, description, category, location, and optional photo controls. The default map location is near Itukulapalli and Anantha Lakshmi Engineering College in Anantapur. Do not submit a new record during the walkthrough unless the instructor has explicitly set aside a disposable test run.

5. Preview the public map. Select Public Map. Show the priority colors and filters for status, category, and priority. Select a marker to see its public summary and tracking link.

What to say about the analysis

The demo checks issue wording, category keywords, selected image features, location importance, and nearby reports. It produces a priority level and department recommendation. Present this as a transparent rule-based prototype, not as a final authority on public safety or municipal response.

03 ROLE WALKTHROUGH

Show the role-based workspaces

Use the Role menu in the top bar. In production, the menu asks for the class demo access key. Enter the key in the masked field and select a persona. The key is cleared after a switch, so re-enter it for each persona change.

PERSONA	WHAT TO SHOW	KEEP IN MIND
Citizen	Open Citizen Dashboard and show reports linked to the demo citizen account, filters, and report timelines.	The anonymous guest test record is not part of this account view.
Municipal Admin	Show city-wide totals, category and department charts, the report table, and reassignment/status controls.	Do not change sample issue statuses during the class demo.
Roads Officer	Show the Roads work queue, including test record CC-2026-9785, and the progress-note/proof actions.	The test report is already In Progress. Do not resolve it without real proof.
Sanitation Officer	Show the separate Sanitation work queue and the two seeded sanitation reports.	The queue changes when switching from another officer persona.

The quick role switch updates the displayed portal as well as the signed-in role. Officers see their department queue. Admin sees all reports. Citizen sees account-linked reports. Guest sees public information.

Finish by selecting Log out. The final production build returns to the Guest Home page.

04 TROUBLESHOOTING AND SAFE USE

Keep the demonstration smooth

IF THIS HAPPENS	TRY THIS
The page or dashboard is still loading.	Wait a few seconds. Render may be waking after inactivity. Use the page retry control if one is shown.
A persona switch is rejected.	Re-enter the class access key in the masked Role menu field. If it still fails, ask the project maintainer to check the Render DEMO_ACCESS_KEY configuration.
The dashboard seems to show the wrong department.	Select the correct officer persona from the Role menu. Confirm the heading and selected department name before presenting the work queue.
A report is missing from the Citizen list.	Citizen view is account-scoped. Use the Guest tracker for CC-2026-9785, or switch to Admin/Roads to show that test record.

Privacy and data checklist

- Use only the seeded demonstration records or clearly labeled fictional test content.
- Do not enter your real name, phone number, email address, home address, or password in the demo.
- Do not upload photos with identifiable people, number plates, or private property details.
- Do not resolve a sample complaint unless the demonstration includes actual repair proof.
- Keep the demo access key out of the screen recording and out of the shared manual.

The project is a classroom prototype. It does not dispatch a real municipal crew and it is not an emergency reporting service. For urgent hazards, use local emergency services.
